

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A sprinkler, comprising:
 - 2 a riser for receiving a pressurized fluid;
 - 4 a nozzle;
 - 6 means for mounting the nozzle at an upper end of the riser for rotation about an axis;
 - 8 a turbine mounted for rotation inside the riser;
 - drive means for connecting the turbine to the nozzle so that rotation of the turbine by the pressurized fluid will rotate the nozzle; and
 - means for preventing a valve that prevents over-spinning of the turbine when the pressurized fluid is air or a mixture of water and air.
